CREATING TOMORROW

Our Go Clean Go Green™ cleaning program is one of Spree's latest innovation and forms part of our overall initiative to provide green cleaning solutions and an environmentally responsible service, so that we can live in a cleaner healthier and more sustainable world.

The development of our environmentally responsible practices has had an enormous positive impact on the way we treat and service our clients from attending to small tasks through to planning and executing the ongoing maintenance of an integrated service contract.

Our overall **'Go Clean Go Green™'** cleaning program takes into account every aspect of the service delivery plan and leverages our best practices with the best in products and equipment from certified suppliers combined with the development of our in-house processes, applications and training.

We have worked closely with our suppliers to develop chemicals which are citrus based with all natural ingredients, containing no VOC solvents and are eco-friendly. More importantly we have reduced the use of detergents and replaced them with microfibre cloths that are made from recycled materials.

Overall our program entails several unmatched methods and technologies and another example is reducing the use of vacuum cleaners and replacing them with a more effective roll sweeper that uses a brush to pile lift the carpet and an adhesive roll to pick up the small debris and particles. The equipment and adhesive roll are manufactured from 100% recycled materials and we re-recycle them once they have been used. This is just one of more than 49 methods that form part of our **'Go Clean Go Green™'** cleaning program, which is helping us deliver a service that is **'Creating Tomorrow'**.
